

# Potatoes

27% yield increase with Vitazyme. Graph below showing tuber yield

2 sprays Vitazyme improved yield by 18%

Typical response with Vitazyme - more roots & tops. In this study yield increase of 8% in furrow, and 12% for the seed application.

Vitazyme - 1 spray at planting and 1 spray 2 weeks later produced 16% yield increase

## Crop Health Program

**Objective :** To maximise root growth, crop health and yield.

Planting (in-furrow or spray)	Rate	Comments
OFS MicroPlus	<b>125-250g/ha</b>	Supports early root growth
Vitazyme	<b>1L/ha</b>	Boosts yields; can spray direct onto soil
Humus 26	<b>10L/ha</b>	Via irrigation or soil spray
<b>Tuber Initiation</b>		
OFS MicroPlus	<b>250-500g/ha</b>	Rate & frequency depend on circumstances
Vitazyme	<b>1L/ha</b>	Spray to stimulate size, yield and quality;
Humus 26	<b>10L/ha</b>	Via irrigation or soil spray
<b>30 days prior to plant death</b>		
Vitazyme	<b>1L/ha</b>	Spray to stimulate size, yield and quality;
<b>To maximise soil biological activity</b>		
MicroPlus	<b>250g/ha</b>	In furrow; repeat soil spray at tuber initiation
Humus 26	<b>5 L/ha</b>	Weekly via irrigation
Fish Emulsion	<b>5L/ha</b>	Weekly via irrigation
Super Kelp	<b>5L/ha</b>	Weekly via irrigation
Molasses	<b>5 L/ha</b>	Weekly via irrigation

### Application notes

Use the higher rates if initial treatment is being sprayed onto soil surface. Vitazyme - spray or via irrigation; increases plant energy production & crop yield. To be used in conjunction with fertiliser and disease program.

*Note: All care has been taken to provide advice based on the latest scientific information. This program is supplied as a base program and should be adjusted for individual situations. As individual farms vary significantly, no guarantee or responsibility can be accepted for crop performance. Plant tissue analysis should be used to monitor crop growth and the program altered accordingly.*
