

Organic Fertiliser

New Era Premium

Premium Organic Fertiliser

OFS New Era Premium Organic Fertiliser is a high quality, pelletised organic fertiliser that provides a range of microbe friendly plant nutrients, including a source of trace elements for improved soil and plant health.

Certified input for organic farming.

New Era Premium Organic Fertiliser is designed as a pre-plant or basal fertiliser for all crops to provide natural plant nutrients. It maintains biological activity in the soil, helping balance soils and improve nutrient cycling by mobilising soil reserves of nutrients.

The major difference between organic/sustainable fertilisers and synthetic fertilisers is the effect on soil biology and the solubility of the fertiliser.

Synthetic fertilisers are soluble and often wasted when they quickly leach out of the root zone.

New Era Premium Organic Fertiliser contains a source of carbon for soil microbes with quick and slow release forms of nitrogen and phosphorus.

Use as a pre-plant or basal fertiliser at 200 to 2,000kg/ha.
(Confirm your crop requirements via soil analysis)

Typical Analysis: N - 5.4%, P - 2.5%, K - 3.9%, Ca - 5.5%,
Mg - 0.49%, S - 0.32%
