

NEW ERA PROTECTOR

Protect Soil

Protect Crops

Protect Fertiliser

New Era Protector is an all natural blend of humates, fulvates, amino acids, vitamins and plant growth promoting agents. Applied as a soil drench, as a foliar spray or via irrigation, **New Era Protector** is used to enhance crop and soil health.

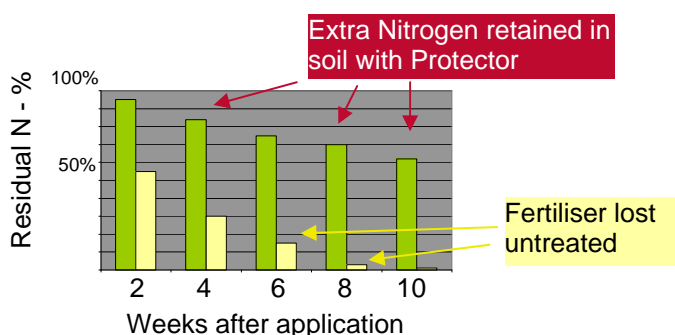

New Era Protector is used in a wide range of agricultural & horticultural crops; turf and landscape situations.

New Era Protector

- Provides a solution to nitrogen leaching and volatilisation
- Promotes root growth and nutrient uptake
- Improves soil moisture retention, buffers sodium in soil, whilst reducing nitrogen usage
- Encourages beneficial soil micro-organisms
- Improves foliar uptake of nutrients
- Provides a natural protective coating for solid N fertilisers
- Ideal for use with urea & UAN fertilisers
- Suitable to blend with liquid UAN fertilisers - reduces leaf scorch

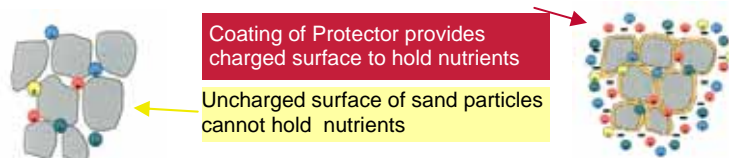

Holds Fertiliser

New Era Protector contains natural compounds that absorb urea and UAN nitrogen fertiliser. When blended with fertiliser, this reduces the nitrogen loss through volatilisation and leaching, whilst improving foliar uptake and reducing foliar burn.

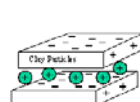

Holds Moisture

Protector applies a coating to the particles in sandy soils, improving nutrient and water holding capacity, reducing leaching of fertiliser through the soil.

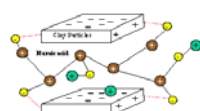

In the soil **New Era Protector** keeps the clay particles apart so that water and nutrients can more easily penetrate.

Good - Protector
Friable, granular & penetrable

Bad - untreated
Compact, hard & impenetrable

New Era Protector

New Era Protector is an all natural blend of humates, fulvates, amino acids, vitamins and plant growth promoting agents. **New Era Protector** is used to enhance crops by improved fertiliser efficiency & reducing leaf scorch (from UAN); and soil health by encouraging beneficial soil micro-organisms, promoting root growth and improving soil moisture retention. Applied as a soil drench, as a foliar spray or via irrigation.

PACK SIZES: 20L, 110L, 200L, 1000L

APPLICATION RATE: **Agricultural Field & Horticultural Crops, Turf**

Solid Fertiliser Coating: Apply 5-8L of **New Era Protector** per tonne of fertiliser. Apply as a spray to coat granular fertiliser; allow fertiliser to dry before use.

Liquid Fertiliser Mix: Use 1L/ha dissolved in an appropriate amount of liquid fertiliser and water (eg 30L UAN, 19L water, 1L **New Era Protector**). Apply as a spray to plant and/or soil.

Via Irrigation: Use 5-10L Protector per ha; 2-4 times during the growing season; up to 25L/ha per season/crop. Dilute 1:100 with water

DIRECTIONS FOR USE: **New Era Protector** is used in a wide range of agricultural & horticultural crops; and landscape situations. It provides improved efficiency of nitrogen fertilisers and moisture retention in soils.

Suitable for use as a soil drench (or streaming nozzles), as a foliar spray or via irrigation. Applied through standard spraying and irrigation equipment; always dilute prior to application.

TYPICAL ANALYSIS: N – 0.01%, P – 0.01%, K – 5%, S – 0.62%, Ca – 0.04%, plus amino acids, humates, fulvates, trace elements, vitamins & plant growth promotants.

STORAGE: Store in original container away from direct sunlight.

YOUR FARMING FUTURE: Farmers are turning to soil health to optimise profits. Ensure your crop performance using our products and cost-effective crop programs.
